

Can't find the applicable standard (KITS)?

KITS organization is based on the Federal Enterprise Architecture Framework and is organized around 5 reference models: Application Reference Model, Data Reference Model, Infrastructure Reference Model, Performance Reference Model, and the Security Reference Model.

If you are unsure whether there is an existing standard that addresses your request, use a word search [here](#) for the product or technology. This link searches the entire KITS library. You can search by any word (you might find an iPad by searching by iPad, Apple, tablet, or mobile).

If you cannot find a standard or technology that appears to match your requirement, please contact the Enterprise Architecture team via [EASStandards@ky.gov](mailto:EASStandards@ky.gov) and describe the product or capability for which you are searching. An Enterprise Architect will assist you in identifying the candidate standard (existing or new).

Architects and systems professionals that would like to identify where in the standards a candidate addition might best fit are invited to explore the FEAF-2 taxonomy [here](#). The appendices will provide a handy reference for the defined FEAF elements and the document will provide an explanation of how it is used.
